To Whom It May Concern:

I am writing today to recommend Shivangi for employment as a software engineer.

Shivangi joined my Agile software development team at Thomson Reuters in January 2015 as a co-op from the Rochester Institute of Technology. Her responsibilities included understanding customer requirements, designing solutions, developing application enhancements, and testing modified components.

When she first joined my team, she quickly came up to speed on our software development processes, technologies, and tools, allowing her to contribute to team velocity in short order. Although our tools included a language with which Shivangi was not well-versed, she was able to pick up a working knowledge of the language readily. The members of my team work interchangeably on application development and on automated quality development. Shivangi fit well in this dynamic, proving equally capable of working out solutions to application tasks as to crafting testing strategies.

Shivangi was very approachable and thoughtful in her communication, which is essential on a highly collaborative Agile team. She was conscientious about her work and knew when to ask questions and when to figure out issues on her own.

I would highly recommend Shivangi to you for your team!

Sincerely,

Jason Knapp
Technology Manager
